# THE SMALLEST MACHINES

Prof. Roop Mallik

The 2016 Nobel Prize in Chemistry was awarded for designing the tiniest man-made machines. These designs were inspired by nanoscale molecular machines that nature has already made a long time ago. In fact, you are using these machines all the time to move around, talk, breathe, blink your eyes and almost everything else you can imagine.

During this session of Sawaal-Jawaab, we will take a look at how strong these machines are, what they like to eat and what happens when they stop working!

Date: April 21, 2018  
(Saturday)

Time: 4:00 PM  
Venue: Lamakaan,  
1, Banjara Hills

ENTRY FREE!

Poster design: Anusheela
